- Best for Sports:** [Neutrogena CoolDry Sport Sunscreen Lotion SPF 50 at Amazon](#)  
*"Conveniently made so you can spray and go."*

Using sunscreen in your daily—yes, we mean daily—skincare routine is necessary in both the summer and winter months to keep your skin healthy for years to come. But [selecting the most beneficial product](#) for your skin is not always easy.

Dr. Carmen Castilla, a dermatologist with New York Dermatology Group, told *Verywell Health* that sun exposure “expedites the degradation of collagen, faster than normal aging.” She recommends looking for a “broad spectrum” sunscreen with a minimum [SPF \(Sun Protection Factor\)](#) of 30 to aid in preventing sun exposure from degrading the collagen. “Consistent use of sunscreen prevents the development of [skin cancers](#), fights fine lines and [wrinkles](#), helps keep your complexion even, and broken blood vessels at bay,” she says.

To get the full benefits of sunscreen, the product should be applied every two hours and after swimming, toweling off, or doing sweat-inducing exercises. Here are a few of the best sunscreens on the market so that you can keep your skin healthy and protected all year long.

## Our Top Picks

### Best Overall: [Isdin Eryfotona Actinica SPF 50+](#)

You don't need to be able to pronounce this sunscreen in order to reap its benefits. Isdin Eryfotona Actinica is a mineral-based, broad spectrum sunscreen that boasts a lightweight formula that does not feel greasy once applied to the skin.

So what does it mean that it is broad spectrum? Dr. Castilla says that label ensures the product protects you from both UVA and UVB rays, which are both harmful to the skin. Also, Isdin Eryfotona Actinica SPF 50+ includes photolyase, an enzyme that helps repair damage caused by the sun, and vitamin E, which works to boost the skin's natural defense.

### Best for Acne-Prone Skin: [ElaMD Broad-Spectrum SPF 46 at Dermstore](#)

Finding a non-oily face sunscreen can be a priority for people with more [acne-prone skin](#). ElaMD Broad-Spectrum SPF 46 uses clean ingredients and is fragrance-free and oil-free to fit the needs of anyone with acne-prone or sensitive skin.

Besides delivering broad-spectrum protection against UVA and UVB rays, the product also incorporates [lactic acid](#) for smoothing, [hyaluronic acid](#) for hydration, and vitamin E to boost the barrier, all while not clogging the pores. What more could you want?

### Best Drugstore: [Neutrogena Pure & Free Baby Mineral Sunscreen Lotion](#)

One of the best tricks in the books when buying beauty products is to look in the baby aisle, as they tend to use ingredients that won't irritate your skin. Neutrogena's Pure & Free Baby Mineral Sunscreen lotion is not only affordable, but it's formulated with zinc oxide—an ingredient Dr. Castilla says sits right on the skin and protects the barrier from sun rays immediately upon application.

Another bonus of the sunscreen is that it's fragrance-free and has been awarded the National Eczema Association Seal of Acceptance. One customer with sensitive skin says they've been using the sunscreen for years after finding it doesn't irritate the barrier or leave white residue upon application.

### Best for Face: [Coola Organic Classic Face Sunscreen SPF 50](#)

Coola Organic Classic Face Sunscreen SPF 50 is the perfect product to grab because it works as both a sunscreen and lotion all in one. The formula hydrates skin while working as an invisible shield against harmful rays. Plus, it's easy to apply prior to putting on makeup.

Ingredients include antioxidant-rich nutrients like red raspberry seed oil, buriti oil, meadowfoam seed oil, and prickly pear extract—all of which protect the skin from free radicals while providing nourishment, says Dr. Castilla. [Avobenzone](#) is another key ingredient, meaning the chemical sunscreen should be applied at least 15 to 20 minutes before sun exposure, Dr. Castilla says.

### Best Powder: [Eminence Organic Skin Care Sun Defense Minerals](#)

Sunscreen powders are beneficial because they can work two-fold: providing protection from sun rays and absorbing oils that form on the face throughout the day. Eminence Organic Skin Care Sun Defense Minerals comes in multiple shades, so it can act as your makeup powder upon application. The powder also makes it easy to reapply every two hours, which is recommended by dermatologists to best protect the skin from the sun.

Ingredients include zinc oxide to protect the skin from harmful rays mixed with vitamin A and E to combat harmful free radicals. Customers say the product is perfect for a quick SPF touch-up and mattifies the skin's complexion.

### Best Stick: [Aveeno Positively Mineral Sensitive Skin Daily Sunscreen Stick](#)

Traveling with a bunch of beach and pool products can take up a ton of room in your bag. That's where Aveeno's travel-sized sunscreen stick comes in. With just a few swipes of the broad spectrum UVA/UVB protection, your skin is ready for sun exposure.

The mineral sunscreen, with an active ingredient of zinc oxide, is fragrance-free and developed for the most sensitive of skin types—so it should not cause any irritation upon application. Customers find the product is gentle enough for their skin and easy to swipe across the face and body.

### Best for Sensitive Skin: [Supergoop! Unseen Sunscreen SPF 40](#)

Supergoop! Unseen Sunscreen SPF 40 is certified clean in stores for its use of ingredients that are vegan, cruelty-free, reef-safe, and gluten-free. Not only does the antioxidant-rich sunscreen boast that it provides broad spectrum SPF 40 against sun rays, but it also protects against blue light and light emitted from phone and computer screens.

Besides using avobenzone as a protective ingredient against the sun, the formula also includes a complex derived from meadowfoam seed to provide hydration and frankincense to create a soothing effect. The best part is that the oil-free sunscreen is lightweight and layers easily underneath makeup.

### Best for Body: [La Roche-Posay Anthelios Cooling Water Lotion Sunscreen](#)

Upon applying to the skin, La Roche Posay's sunscreen provides a cooling effect to the barrier as it penetrates deep to offer protection from UVA and UVB rays. The sunscreen is formulated with Cell-Ox Shield antioxidant technology to defend against free radicals that would be harmful to the skin and accelerate the aging process.

Besides providing protection, the sunscreen is also paraben and fragrance-free so it should work for all skin types. Customers say the product is worth every penny and rubs on like a moisturizer.

### Best for Body Runner-Up: [Coola Mineral Body Sunscreen](#)

This chemical-free, mineral sunscreen boasts using clean ingredients when cultivating the perfect formula for protecting your skin against sun rays. If you're looking to be environmentally friendly, this product is for you because it's reef-safe and uses a 100 percent recyclable bottle.

After applying the sunscreen, it works to hydrate and nourish the skin while offering protection. The best part? It is non-greasy and doesn't show a white cast across the skin after using.

### Best for Sports: [Neutrogena CoolDry Sport Sunscreen Lotion SPF 50](#)

Playing sports or being active outdoors can come with a lot of sweating, so it is imperative to find a sunscreen that lasts during sweat sessions. Neutrogena's CoolDry Sport Sunscreen is designed specifically to be sweat and water resistant.

Its formula features a Micromesh Technology that allows sweat to pass through and evaporate from the skin without removing the protective barrier. The spray also makes it easy to apply it on hard to reach places, such as the back and shoulder blades. When using a spray, Dr. Castilla recommends applying until you see a sheen on your skin. “Once applied, ideal that you rub the sunscreen into your skin,” she adds.

### Best for Kids: [Coppertone Pure & Simple Baby SPF 50 Sunscreen Lotion](#)

Protecting your [child's skin](#) when out in the sun is a top priority, specifically because of how sensitive the barrier can be depending on their age. Coppertone's Pure & Simple baby sunscreen is gentle and hypoallergenic to not irritate the skin.

The formula is also free of dyes, fragrances, and oils while providing a broad spectrum of coverage to protect against UVA and UVB rays. Customers say the sunscreen is a go-to for their children and rubs in easily while protecting them from getting sunburns.

## Final Verdict

If you're looking for an all-around protective sunscreen that works for multiple areas of your body, we recommend [Isdin Eryfotona Actinica SPF 50+](#). If you want something specifically formulated for the face that will sit well under makeup, we recommend [Supergoop! Unseen Sunscreen](#) SPF 40.

## What to Look for in a Sunscreen

**Ingredients:** The main ingredient Dr. Castilla recommends for people to avoid in sunscreens is insect repellents like DEET. If you have sensitive skin, she says using sunscreens made with zinc oxide and titanium dioxide will work better to not irritate the barrier.

**SPF Count:** “Look for a sunscreen that says ‘broad spectrum’ with a minimum SPF of 30,” Dr. Castilla says. The “broad spectrum” label means the sunscreen will protect against both UVA and UVB rays from the sun. For the SPF to work as it should, Dr. Castilla says applying frequently is a must.

**Area of the body:** Sunscreen you use on your body will not always work well for your face, as that area can be more sensitive or prone to acne. Dr. Castilla recommends being aware of your own skin type—whether it be dry, sensitive, acne-prone, etc—when selecting what sunscreen to use on the face.
